PRICE TWOPENCE

SCIENTIFIC RESEARCH

It is a matter of fairly general agreement that research is one of the primary functions of a university, but when one enquires what kinds of research should be permitted and fostered, and why, the answers are diverse and sometimes even contradictory.

Some assert that research is, and ought to be, an end in itself; that the acquisition of new knowledge or the reorientation of old knowledge is an occupation which needs no justification—it satisfies an aesthetic and emotional urge in those who pursue it, and that is enough. Yet those who take this view usually hesitate to press it to its logical conclusion and to say that the subject matter of the research is of no importance. They would, for instance, probably not be prepared to encourage or finance a research into the average number of matches per pipe used by smokers, or the colour of the hair of the Kings of England. It seems that in practice even the advocates of research for its own sake incline towards research which bears on some general question of intellectual interest, and which, in short, fits like a fragment of a mosaic into some larger scheme.

There are, on the other hand, those who assert that knowledge is a good thing in itself; that the pursuit of it is to be encouraged, and that the winning of new knowledge is therefore a laudable activity which is justifiable on this ground alone, the satisfaction and pleasure of the individual research worker being a secondary matter.

Distinct from research pursued to satisfy personal inclination or to acquire knowledge because knowledge is deemed to be good, there is what may be called applied research, directed towards the acquisition of knowledge for material ends. Its technique may be, and generally is, identical with that of pure research, but its spirit is different. Its results are of the most diverse kind for it has discovered anaesthetics and produced high explosives, prepared insulin and distilled poisoned gas, shortened working hours and swelled the ranks of the unemployed. Evidently the results of applied science are, in themselves, neither good nor bad, nor is it in practice possible for the individual research worker to envisage the use that may be made of his work. That is a matter for regulation by the state and by public opinion. It is not, for instance, just to blame the research worker for the evils of poison gas and bombing aeroplanes. As a citizen he bears his share of responsibility for the right use of modern technical resources; as a technical expert he must take his part in enlightening public opinion as to the potential uses of invention, but the ultimate responsibility rests with the whole community of which he is no more than a part.

It seems justifiable therefore to pay no attention to the rather hysterical demands, which are sometimes made, that applied science should take a holiday and cease to produce new inventions and discoveries for fear that they may be misapplied.

Incidentally it may be remarked that applied research offers to university graduates of suitable training and personality careers which are interesting and, from the pecuniary point of view, not ill rewarded.

At the present time there is a large demand for young research workers in industrial concerns, in the various sections of the Department of Scientific and Industrial Research and in the Service organisations. In order to qualify for such appointments it is usually desirable that a man, having graduated in the particular branch of science he has chosen, should undergo one or two years training in the methods of research at a university before seeking employment. This preliminary training has, in addition to its obvious value in improved technical qualifications, two other advantages. On the one hand it enables the young graduate to make quite sure that research is the kind of activity in which he will happily spend his life. On the other it enables the prospective employer to get some idea from the laboratory in which the graduate has been working as to whether he is the type of man who is likely to be useful.

Finally, I should like to indicate what is, in my view, one of the chief benefits (albeit an indirect one) which research bestows upon the community. Research, pure or applied, cannot be successfully prosecuted by biased or undisciplined minds. It requires a ready acceptance of facts, a patient unravelling of evidence often at first sight conflicting, and a willingness to change one's mind in the face of fresh data. Bluff will not do, nor pretence, nor undisciplined emotion. In a word, scientific research requires the scientific attitude of mind. Now, if in a community there are a number of scientifically-minded people, their habits of thought and mental discipline will slowly and imperceptibly, but none the less certainly, affect the mentality of those with whom they come into contact. On the whole, and over a long period of time, their influence becomes felt and logical precise thinking slowly leavens the lump of prejudice, intolerance and hysteria. The material inventions and discoveries of science may often be harmful, and in any case may become obsolete, but the scientific habit of mind will remain a permanent and beneficial possession of human society when sky advertisement, the blaring loudspeaker, poison gas and the bomb are remembered only as the immature follies of a crude and barbarous age.

Editorial.

So far this term the weather has been very unkind to sport, and all athletic clubs have had their fixture lists disorganised. But this week has seen some sport of less artificial kind: ground and equipment were both provided by Nature, although the gate paid (subsequently) was rather heavy for spectators and players.

But the snow did more than provide sport for the idle rich or temporary work for the unemployed. The New Forest on Saturday looked grander than ever. The brown and green of bracken and bush were flecked with the white of melting snow. Ditches were full to overflowing, the Avon at Christchurch was a quarter of a mile wide, and broad shallow streams flowed where a few months ago cattle grazed contentedly. Altogether, it seemed that Nature had set herself out to inspire awe and respect in the hearts of puny mortals trespassing on her domains.

The 'flu epidemic seems to have abated, in spite of a misguided attempt by the President to prolong its popularity. It has been suggested that the reason that Highfield suffered more than the other Halls was that the "Orange and Gargle" treatment imposed upon the women induced a state of mass fear, thus rendering them less resistant to germs.

College seems quite placid at present, although there is much going on behind the scenes. The Boat Club is pursuing its "get-it" policy (incidentally, a cold bath with snow on the ground outside makes one a snob for the rest of the morning), the Choral Society is rehearsing strenuously, and the Students' Council office is a hive of industry, wherein questionnaires and lists of addresses are compiled, and elaborate plans formulated for making the N.U.S. Congress a real success.

As was pointed out at a recent S.C. meeting, "Wessex News" can be produced more efficiently and economically if contributions are sent in early. If type for the front and back pages can be set up on Saturday morning, it is not necessary for the printers to work late on Monday evening. Matter for publication, particularly correspondence and items for the Calendar, should therefore be handed in by Friday if possible.

Pestilence

Now after the finding out of the wizards, there came upon the Land many days of storm, both wind and rain, the which engendered a pestilence whereof many fell sick. Now certain of the women desired vehemently to get much money, wherewith to buy them boats. And lest this should seem strange, be it known that they would fain journey abroad to get themselves husbands: for the men in this Land wiled wed none of them. So they planned a banquet, with music and dancing, to come to the which men should pay money, one silver piece. But many women fell sick of the pestilence, and the Hall of Women became unclean: therefore they held the banquet at the Hall of Conspicuity, wherein dwell men only: which indeed is a thing unmanly and shameful, and I, the scribe, blush to record it, yet must I do so, for it is sooth, and no lie.

And Prinnee the King, who is in truth a father to his people, saw what scath the pestilence wrought among them, and he called together his nobles all, and asked of them if they knew of any means whereby the sickness might be stayed. So some said one thing, some another, but there arose at length one of great age, who had sojourned in the East, who said that the oil distilled from the liver of a certain fish of the North (this fish is large and like unto a monstrous Dab or Flounder) would infallibly cure the sickness.

So they sent a trusted messenger to the North, where dwell the outland folk, whose speech no man may ken. And after many days he returned, bowed down and a-weary, bearing on his back a great fish. So the wise men of the Land took from this fish the entrails, but the body they gave to the Hall of Eating. And they did stew the entrails in their alembics, and drew thence an oil, the virtue whereof was so great that the sick, when they had drunk but little, were healed.

But the rest of the oil have the women taken to anoint themselves and their boats withal, against the journey, which will be both long and toilsome.

Protest

One of the favourite bogies of that monstrous bully, the Modern Advertiser, is the Unnaturalness of Modern Life. On every page of the daily newspapers he seeks to intimidate us with this bugbear. White bread, tight shoes, sedentary life, the atmosphere in buses, starvation of one comic kind or another—these help to make life not worth living nowadays, unless we cram ourselves with vitamins, laxatives, cold-cures, sleeping-draughts, and their like. But, although the idea of gorging to repletion on goblets of half-raw horseflesh, washed down with ditch-water, and sleeping it off in a stinking stuffy cave, lying in a litter of old bones and hunting-dogs, is very attractive to some of us, and is also, presumably, the ideal life, most of us seem to get on pretty well as we are.

One thing, however, which would strike an intelligent primitive as being unnatural is the way we work here.

"Man scotch forth unto his labour until the evening." But it is not so with us. The evening brings no rest from work, but is rather the time when most work is done. The hours man was meant to work in, the hours of daylight, are frittered away in lecture-room and library, and we have become practically nocturnal in our habits. Because we go to bed so late we waste hours of daylight in the mornings, lying asleep, losing the best hours of the day. There must be something wrong with a system which makes men work at night and sleep in daylight.

Furthermore, how many people here really rest from their work at the week-end? A game on Saturday afternoon, then a later bed-time than ever on Saturday evening (or Sunday morning), and some work, however little, on Sunday. Apart from the sabbatarian point of view, why won't people rest from work when they can do so with a clear conscience?

A day's complete break from work once a week is of more value than a long holiday after many days' continuous work.

Either we're a set of fools, or we are a most miserable crew of cowards, terrified by examinations into a lop-sided and utterly senseless way of living. Still, what else can we do? Quite a lot.

Russell Hall Entertainment

Russell Hall were "at home" on Saturday evening, when Highfield and Montefiore Halls were entertained: true to tradition, the evening was characterised by its beautiful simplicity, the wonderful lack of organisation and the performance of unrehearsed sketches on the stage which have long been the outstanding features of Russell entertainments. Nevertheless, it is this spirit which has in the past helped to make Russell "do's" so popular, and Saturday evening proved to be no exception. The air of levity which pervaded the hall, was given its baptism by the introduction of a "Dummy Dance," and it must have gladdened the hearts of many to see dear "Old Dud" frantically pirouetting in a vain attempt to avoid carrying the baby.

As already gently hinted, the entertainment lacked the finished touches which result from careful preparation, but it was nevertheless "passing fair." The insight into Greek Tragedy did not perhaps coincide with Milton's ideas on this subject, but no doubt gave a good indication of the students' opinions of such drama. The vocal attempts—both collective and particular—would no doubt have been successful had the numbers been decided upon beforehand. The resulting efforts were, however, deserving of the applause given.

The happy atmosphere continued to the end, and tired but contented feet strolled homeward—sometimes admittedly only to be retraced—feeling that once again Russell Hall had justified itself in the manner and spirit in which the entertainment had been carried out.

University Labour Federation

This Conference was held at Manchester during the Christmas Vac. One of the main subjects considered was the Spanish situation. Delegates felt that this was no longer a merely local affair, but an expression of the separation between Fascism and Communism taking place all over Europe. The Conference called upon the Labour Party to initiate a "wide campaign to help the Spanish Government."

Great progress has been made by the U.L.F. in the past year, and the problem of extending its activities so as to increase its influence was discussed, the following resolution being passed:—"We must develop a live Socialist policy and a clear compelling position in all questions which affect Students."

With regard to the general political position, the Conference called for a policy "to unite all sections of the Labour Movement and all progressive forces," so that a clear alternative to the present Government could be advanced.

D. R. Pearce, Sec. Socialist Society.

ATHLETIC UNION.

SOCCER LOSE VITAL U.A.U. GAME

Weather Again Upsets Saturday's Sports

Boat Clubs in the News

Once again the weather man has stepped in to interfere with college sport. As a result of the snow, followed by rain, all matches were scratched on Saturday, but fortunately, a comparatively fine beginning to the week's weather enabled Wednesday's games to be played. The Rugby and Netball teams both registered good wins.

After opening the scoring in their U.A.U. match against Exeter U.C. at Swaythling, the Soccer team were defeated by three goals to two, the score clearly indicating the closeness of the game. College thus lost the only chance of gaining the Southern Championship, as it was necessary for the team to draw at least, in order to keep in the running. A superior forward line, however, gave Exeter the victory.

The Rugby XV made a promising start to the term when they defeated R.A.F. Calshot on Wednesday by 10 points to 6, and this fine victory should give them great encouragement for their U.A.U. game against Reading on Wednesday.

The Boat Club has now entered into full training in preparation for the strenuous weeks ahead; it would be interesting to know the secret which makes the members of the Rowing Club so keen; for years now they have been the only people to undertake serious and systematic training, and the success of the Boat Club is very largely responsible to this fine attitude. How different to the slackness of other clubs in this respect! One can rarely see anything in the nature of serious training on the Athletic Ground, and in fact no other club appears to consider training of sufficient value to include it in their policies! What a difference there would be in College achievements—not only on the sports field—if more people took a feather out of the Boat Club's hat and trained systematically. Congratulations to you, B.C., and it is to be hoped that results will justify your efforts.

HIGHFIELD HANDICAP.

Our Form expert quotes the following odds for this event:

Evans 8-1
Wareham 15-1
Morris 15-1
Kitsen 500-1

Several others have shown quite good form in preliminary contests. Sidgriff, who has done so well in other races, has been withdrawn by its owners, as it is felt that this type of race, where the going is heavy, is unsuitable for so young an animal. He will probably be entered for higher stakes later on in the year.

RUGGER.

R.A.F. Calshot 6 pts. U.C.S. 14 pts.
College started the term with a well-deserved win against R.A.F. Calshot by 10 points to 6 points on Wednesday.

In the first half, they were unable to make full use of the down-hill slope as the sun shone in their face, but Burden was able to fall on the ball after it had been knocked over the line by a Calshot outside. Roberts converted. Wife, R., scored a second try from a good dribbling movement and Roberts again converted.

In the second half Calshot scored twice, once between the posts, but they failed to convert. They also missed an easy penalty goal.

Wednesday, Feb. 3rd.
U.A.U. v. READING.

NETBALL.

U.C.S. 17. Queen's 6.
Although Queen's were not up to their usual standard on Wednesday, College played well to win by such a substantial margin. The team had never played together before, and there was much mulling in the first half, and far too much careless individual play. The game improved in the second half; passing was better and there were fewer dropped balls; the shooters were active, not only in shooting but also in their play in the goal circle. It was an enjoyable game, but a poor exhibition of Netball.

MEN'S HOCKEY.

R.A.F. Worthydown 2 goals,
U.C.S. 0 goals.

The conditions under which this match was played made good hockey almost an impossibility. The pitch was sloping and bumpy and the surface slow and erratic. In spite of this, however, College accounted well for itself and should have scored more than once. The forwards, however, on the slow side at the best of times, were rendered even slower by the uncertainty of the pitch, and failure to score was the result.

Other matches were scratched owing to the weather conditions; we can only hope for better conditions in the future.

WOMEN'S BOAT CLUB.

The Club hope to be able to announce in the near future the possession of a Tub Four, though it will only be partly paid for. Still, after the launch on January 23rd, another £3 4s. 6d. has been added to the Club Fund! Mr. Dudley has donated 10/-, and Miss Henderson 5/-. The Club hopes, then, by its own efforts and by the help of friends to continue until it has sufficient funds. The

members would like to thank all those who have so far supported them with contributions, and those who so willingly and ably helped to make the dance a success.

SOCCER.

U.C.S. 2, Exeter U.C. 3.

The pitch was very muddy after recent heavy rains but by swinging the ball about both sides made repeated attacks.

College were the first to score after 15 minutes. A penalty was given to U.C.S. for "hands" and Robson made no mistake from the spot. College were now the superior team and did most of the attacking. During one of these attacks the ball rolled right across the front of the Exeter goal with no-one near enough to put it into the net. Wallace was working very hard at right-half and sent in several dangerous shots. The Exeter outside-left then scored with a grand shot. Just before half-time Exeter went ahead following a scramble in front of the home goal-mouth.

With the wind at their back Southampton were soon attacking and within five minutes had equalised through Eden. Belton raced away and centred and meeting his centre Eden shot into the net. College now put everything they knew into attack, but try as they would, College could not score. Both Eden and Wallace narrowly missed scoring and other good attempts were frustrated by the Exeter goalie. Exeter eventually attacked and Robson had to bring off several good saves to keep them out. Whilst College were appealing for off-side the Exeter left-winger put his side ahead again with a good shot from a difficult angle.

All the "fire" now appeared to go out of the College team and Exeter were attacking when the final whistle went.

Robson was in fine form in goal for U.C.S. and Cowling and Newland did good work in defence. Cook was brilliant for Exeter in some of his movements and Wallace was outstanding in attack and defence for Southampton.

FIXTURES.

3rd XI v. Old Issonians (home).

Pride of Race

Out of the mists of the West was
past
We come, the chosen, elected few;
Ours is the Breeding and the
Caste:
We are the '32.

We are the kings, the regal line,
The stars in a surrounding night;
The unelect may only shine
With a reflected light.

The fellowship of other breeds,
Of many and of mongrel curs,
Is but the strife of heathen creeds,
We are the arbiters.

We seal our aristocracy
With friendly beers reciprocate,
But for the unelect shall be
A fierce, undying hate.

You, Freshers, you should all
aspire
For entrance to our Inner Ring:
Thus does the PRESIDENT
require,
And he can pull, if you desire,
On many an Influential Wire,
And many a useful String.
W.S.B.

EPILOGUE.

To the Editor of *Wessex News*.
Sir,

Internal Disorders in College.

We are happy to record in topical song some of the recent happenings in College.
Enter pyjama-clad Refs, martyrs with agonised expressions.
(All)

Carefully on tiptoe stealing
Cursing softly in our plight,
Every step with caution feeling
For it is the fourteenth time
to-night.

(Sound of Rushing Waters)

Goodness me

There's quite a crush.

(Solo by Tommy Aike)

Silent be

I hear the flush.

I hear, I hear the flush.

(All)

He's right, no need to rush.

The President says:—"I'm the best advertisement for Crooke's Halibut Liver Oil."

How many of Highfield have given the excuse that Friday's blackout was responsible for the lateness of their essays?

The Rambling Club was joined by another dog last week. It was motheaten about the ears, and our canine expert identified it as belonging to the well-known "Shirley Pot-Pouri" breed. It covered the 20 mile course well, but in true Rambling Club style it finished up by being taken home—to the Southampton Police Station!

Broadmindedness! A well-known College Conservative was seen going in to the S.C.M. meeting on Saturday morning carrying a "Daily Worker."

War in the Mediterranean?

K. J. Newman introduced, last Friday, a series of talks arranged by the L.N.U. on modern international problems, with a review of the situation now obtaining in the Eastern Mediterranean region. He commenced by explaining that the hieroglyph on the wall was merely a modernistic conception of the region under discussion, and with an occasional wave of his spectacles, went on to enumerate European interests in the near and far East involving the use of the Suez Canal, which was therefore a main zone of friction. Then followed an outline of the relations of Abyssinia with European countries since 1900, culminating in the Italo-Abyssinian conflict and the resultant annexation of Ethiopia. England's interest in the Suez Canal was next dealt with, and it was shown how the recent Anglo-Egyptian Treaty could easily be construed as the outcome of alleged Italian activity in Abyssinia.

That the Eastern Mediterranean is a zone of friction is not open to serious doubt, but as to its result the speaker expressed no opinion, and very little discussion followed.

The speaker emphasised the manner in which, to gain their own selfish ends, Powers merely exploited the League, which performance remains impotent. If it is to gain its ends the League must be reconstructed so as to include all nations, and not remain a meeting-place for a chosen few of the world's premier countries: it must, in fact, become what it is not at present—a League of NATIONS.

R.D.G.K.

CHESS CLUB

Two fine wins and a bad loss was the lot of the Club last week. The "B," playing the Rooks, failed to get going, and lost 4½-2½; but the "A" and the "C" easily accounted for the Taunton School teams, each winning 5 games with one still undecided in the former match.

On Wednesday, two teams will be competing in the Lightning Team Tournament at Taunton School, one in each Division.

It is to be hoped that Finals (or any other) Fever will not continue to diminish our resources which have already dwindled to an alarming extent.

Correspondence

The Editor, Wessex News.

Dear Sir,

I would like to correct some of the statements made by Miss Scott in regard to the S.C.M. Quadrennial in last week's "Wessex News." Her first statement that the lack of organization was very apparent shows a complete ignorance of the facts. The organization of hospitality for some 2,000 delegates is no mean feat, yet everyone who registered properly received free accommodation. It is simply untrue to say that for at least three nights over twenty per cent of the delegates were very inadequately accommodated; eighty men—four per cent—were accommodated in a church school—not a church hall—with good heating, washing facilities, free meals, etc.

Miss Scott stated that she found it impossible to discover the objects of the conference; did the title, "God Speaks to this Generation," mean nothing to her? To my mind it seemed obvious that the conference was called to find out how God does speak to this generation, if He speaks at all.

In regard to discussion, did Miss Scott stop to consider how one person speaking in a hall the size of Birmingham Town Hall could possibly be heard without the use of a microphone? I would add that there were two discussion groups set apart in which any one who wished could discuss the subjects of the general meetings.

Of the eight main meetings, two only were directly concerned with missions; how then could "missionary propaganda" be "rampant"?

My impression was that practical Christianity was everywhere apparent; a critical body of students was demanding to know what positive contribution Christianity has to make towards the cure of the terrible ills of the world at this time.

This desire to find the answer to present-day problems was too compelling to allow delegates to feel very pleased with themselves, or to work themselves up to an emotional height of self-comfort. They saw at Birmingham that the world will not wait until professing Christians have warmed themselves by the pleasant glow produced by the wood from the kindly Cross of God. This was the challenge which faced me and which made my brain a whirl as I left Birmingham.

Yours sincerely,
L. H. Moore,
(Sec., S.C.M.).

SHOULD WOMEN PAY?

To the Editor of Wessex News.

Dear Sir,

At the risk of being criticised for indolence and lack of taste we wish to raise a question which has long been simmering in the minds of several estimable fellows who wish to take part in the

social activities at College.

Should Women Pay For Them-selves?

Admittedly most Coll. women are very sporting in this awkward matter, but some greedy (or thoughtless) parasitic fellows unscrupulously feed, "flick," and dance at the expense of their male friends. These fellows, through a misguided sense of chivalry, are bled without complaint.

Stop capitalising Sex-Appeal, Oh ye of the stock of Delilah!

One sufferer has ruefully confessed to us that shirt, socks, and sundries are laundered only once a fortnight now that he is friendly with Miss G. Digger.

Surely in such a community as this, where allowances are more or less equal, women should not only offer, but INSIST ON PAYING FOR THEMSELVES.

Yours, etc.,

D. B. Barker.
M. J. Hoyle.

LIBRARY HOURS.

To the Editor of Wessex News.

Dear Sir,

I have received a letter from the Librarian with reference to the alteration in Library hours, which I shall be glad if you will print.

Yours, etc.,

P. G. Wickens, President.

Dear Mr. Wickens,

I shall be glad if you will draw the attention of students to the fact that on and after Monday, 1st February, the library will be closed for the hour between 1 and 2 and also on Wednesday afternoons. This decision was arrived at by the Library Committee on Friday last as a result of a discussion on the necessity for additional staff. It is not possible to appoint extra staff immediately, and, as a temporary measure, this alteration in hours has been devised. It will enable the library staff to give more time to the cataloguing and other general work of the library by reducing the hours of attendance at the counter. I want to emphasise quite clearly the fact that this arrangement is to be made only as a temporary measure.

Yours sincerely,

D. P. Powell,
Librarian.

CHINESE STUDENTS

To the Editor of Wessex News.

Dear Sir,

May I just say that the Chinese Students' demonstrations mentioned in my previous letter have ceased, as the Government put an end to the whole thing almost immediately after it had started. Interviews with representatives from the Authority were granted, and a perfect understanding has since been established between the Government and the Student body, as seen from the nation's attitude in dealing with foreign affairs.

Yours, etc.,

Kei Yan Wai.

Calendar

Tuesday, Feb. 2nd.

1.20 p.m. Christian Union. Bible Study. Room 35.
6 p.m. Choral Society Rehearsal, Assembly Hall.

8 p.m. 4th Lecture of a Series of Ten University Extension Lectures on "Our Language," by Dr. S. Potter, M.A., B.Litt., at University College.

8 p.m. 3rd Lecture of a Series of Ten University Extension Lectures on "Modern English Writers," by Professor V. de S. Pinto, M.A., D.Phil., at The Awdry Tearoom, Winchester.

Wednesday, Feb. 3rd.

7.30 Institution of Production Engineers Committee Meeting.

Thursday, Feb. 4th.

1.20 p.m. Architecture Society Room 1. "Misericordes," by Miss A. M. Trout.

8 p.m. 4th Lecture of a Series of Ten University Extension Lectures on "The Ancient World" (Greece and Rome), by Prof. G. F. Forsey, M.A., at University College.

8.15 p.m. Public Lecture: "The Vision of Pieter Plowman," by Dr. S. Potter, M.A., B.Litt. (University College, Southampton).

Friday, Feb. 5th.

5.15 p.m. Geographical Society Room 1. A Lantern Lecture will be given by W. P. Burton, Esq., entitled "Custom and Folk Lore in a Congo Tribe."
5.15 p.m. Biological Society. "The Ecology of Fresh Water," H. P. Moon, M.A.
8.15 p.m. Inter-Varsity Debate.

Saturday, Feb. 6th.

Union Hall.

Sunday, Feb. 7th.

9.45 a.m. Collegiate Service at St. Mary's, South Stoneham. Preacher: The Rev. C. S. Herbert, B.D., of the Avenue Congregational Church, Southampton.

Monday, Feb. 8th.

8.15 p.m. Public Lecture: "Indo-European Linguistics in Relation to the Study of Mythology," by Professor A. Garney (Prof. of Comparative Philology at the University of Louvain).
